Office Action Summary	Examiner	Art Unit			
	Quang T. Van	3742			
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3742

## Withdrawing Allowable Subject Matter

1. The indicated allowability of claims 1-10 and 17-19 is withdrawn in view of the newly discovered reference(s) to Lee et al (US 6,909,078). The Examiner regrets for any inconveniences. Rejections based on the newly cited reference(s) follow.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Lee et al (US 6,909,078). Lee discloses a cooking assembly in microwave oven comprising a cavity (20) in which food is loaded; and an upper duct (600) having a main body mounted in the cavity (20), a duct fixing member (645) formed on a side of the main body and fixed on a wall of the cavity (20), and an inclined portion (620) extending from an end of the main body and inclined at a predetermined angle (Figures 10A-B).

## Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/575,789 Page 3

Art Unit: 3742

5. Claims 11-13 and 15-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al (US 6,909,078) in view of McCammon et al (US 4,556,772). Lee discloses substantially all features of the claimed invention except an air curtain forming device that prevents steam generated in the course of heating the food from contacting the door, wherein the air curtain forming device comprises an air-guide hole through which air is directed into the cavity and an air-guide formed around the air-guide hole and extending downward, and wherein the air-guide is inclined rearward of the cavity. McCammon discloses an air curtain forming device (44, Figure 6) that prevents steam generated in the course of heating the food from contacting the door (abstract), wherein the air curtain forming device comprises an air-guide hole (196, 198) through which air is directed into the cavity and an air-guide (194) formed around the air-guide hole and extending downward, and wherein the air-guide (194, Figures 6 and 10) is inclined rearward of the cavity. It would have been obvious to one ordinary skill in the art at the time the invention was made to utilize in Lee an air curtain forming device that prevents steam generated in the course of heating the food from contacting the door, wherein the air curtain forming device comprises an air-guide hole through which air is directed into the cavity and an air-guide formed around the air-guide hole and extending downward, and wherein the air-guide is inclined rearward of the cavity as taught by McCammon in order to prevent the moisture attaching the door.

## Response to Amendment

6. Applicant's arguments with respect to claims 1-10, 11-13 and 15-19 have been considered but are moot in view of the new ground(s) of rejection.
